Doinski, A. (Honored Master of Sports); Gulubov, G. (Honored Master of Sports); Dimitrov, M. (International Umpire); Yonchev, D. (Doctor)

Handbook for sky divers (Rukovodstvo za parashutista sportista) Sofia, Izd-vo "Meditsina i fizkultura," 1965. 188 p. illus., biblio., photos. 1076 copies printed.

TOPIC TAGS: parachute jump training, sky diving

PURPOSE AND COVERAGE: This handbook is intended for students, sportsmen, instructors, and trainers in volunteer organizations assisting in the defense effort. It represents the first review of Bulgarian parachute development, and the newest Bulgarian sky-diving parachutes, the SP-5 and SP-6, are described. Also contained in the book are the results of many years of medical observations of the effects of parachuting on the human organism. Health requirements for the parachutist are also given. Particular attention is paid to the training of novice parachutists and sky-divers, and to practical problems as opposed to theoretical problems. The most frequently needed formulas and calculations used in sky-diving are also presented. There are 14 references: 10 Soviet and 4 Bulgarian.

"Adsorption of Benzene at the Dropping Mercury Electrode in Aqueous and Ethanolic-Aqueous KCl Solutions."

Warsaw, Rocznik Chemii, Vol 37, No 9, 1963, pp 1043-1050.

Abstract: [English article, authors' summary modified] The purpose of this paper is to obtain more detailed quantitative information on the double-layer structure when benzene is present, by measuring the double-layer capacity. Adsorption of benzene from aqueous and water-ethanolic KCl solutions at the dropping mercury electrode was investigated by measuring the differential capacity with the A-C compensation method. Adsorption isotherms were determined, and the heat of adsorption estimated. The solubility of benzene in the solutions under investigation was determined spectrophotometrically. Ten references, including 1 Polish, 2 Russian, 2 German, and 5 Western.

Title : A Polarographic Study of the Anode Oxidation of a Lead Amalgam in Alkaline Solutions.

Orig Pub: Roczn. chem., 1957, 31, No 1, 205-212.

Abstract: The anodic waves of a Pb amalgam were studied in buffer solutions having a pH from 8-13. In solutions having pH-9 the anodic wave is splitting and the maximum current equals that observed in neutral solutions and is reached at E = 0.2v (sat.c.e.). The composition and concentration of a buffer solution effects the nature of polarographic waves. The effect of a current suppression as a result of an adsorption process can be noted (a disap-

Abstract: pearance of oscillating, formation of a current minimum). In alkaline solutions containing a complexing agent (tartrate) at E = -0.5v one wave is produced with a height corresponding to the diffusion current. The observed abnormalities are explained by the formation of a $Pb(OH)_2$ (precipitate or basic salt) which is being adsorbed on the electrode surface (R.Zh.Khimiya, 1958, 17222). An electrolytical method for Pb amalgam preparation is described.

DOJLIDO, J.

Polarographic investigation of cadmium amalgam in alkaline solutions. Wiktor Kemula and Jadwiga Dojlido (Univ. Warsaw). *Rocznik Chem.* 33, 451–60(1959)(English summary).—It was found that in 0.2*N* KCl and in concd. NaOH solns. the anodic wave of Cd amalgam (I) had the same half-wave potential as the cathodic wave of Cd in the same solns. Hence the process is reversible. A study of dissoln. of Cd from 2×10^{-4} and 10^{-3} *M* I showed a sharp break of the anodic wave due to formation of $Cd(OH)_2$. It disappeared in concd. NaOH solns. by formation of sol. complexes. The half-wave potential changed from −0.60 to −0.91 v. with increase of concn. up to 15*N* NaOH. The anodic waves of the more concd. I reached the limiting current for more pos. potentials in NaOH than in KCl solns. which was probably due to damping of the current by the $Cd(OH)_2$ ppt. This action appeared when a polymol. film was formed on the electrode. A. Krzeiewski

Orig Pub : Studii si cercetari stiint. Acad. RPR. Baza Timosoaza Ser. stiinte chim., 1956, 3, N1-2, 57-65

Abstract : A method based on the precipitation of As in the form of $(NH_4)_7$ AsO $(Mo_2O_7)_5 \cdot 4H_2O$ is described. The washed precipitate is dried rapidly and weighed. The determination time is 20 minutes. The method is specific, exceeds the classical methods in accuracy and is particularly suitable for the determination of small amounts of As.

Orig Pub : Byul. nauchno-tekhn. inform. Kirg. n.-i. in-t zhivotnovodstva i vet., 1956, No 1-2, 44-47

Abstract : The results of two experiments in the raising of fine-wool and semi-fine-wool young rams are described. From 1½ months of age up to weaning, they were fed with concentrates as a supplement, apart from pasture, and they attained the weight of 38kg., as compared with that of 27-28 kg. in the normal flock. After summer grazing, the first group was receiving 2 kg. of hay of medium grade and 300 g. of coarse ground barley with bran; the second group- 2 kg. of hay and 600 g.
